

## Frontend Automation Setup Manual

**Git repo:** <https://github.com/JUDEll/Amazon-Webdriver-Testsuite/tree/master>

1. Visit the GIT repository via the url and clone the project from the “master” branch.
2. The project is a maven project, so ensure that you have maven installed on your local machine
3. Open the project with an IDE and sync dependencies
4. The project is already designed to run with firefox (gecko driver) configuration. Ensure there is a firefox browser installed in your local machine.
5. The configuration is available in the configuration package :  
src/test/java/config/config.properties
6. To run the test, navigate to the PurchaseHatsTestSuite class inside the actions folder :  
src/test/java/actions/PurchaseHatsTestSuite.java

7. The test is managed using TestNG framework and page object model design pattern
8. The reporting is via console and TestNG
